**\$11,653 WORTH OF
BULLION SHIPPED
FROM EARL LEASE****Consolidated Property Is Scene
of Much Activity—Ledge Is
Struck on Big Four Lease.**

(From the Manhattan Post.)

A partial clean-up was made by John Swanson at the War Eagle mill this week, approximately 1000 tons of ore from his lease on the Earl claim having been treated. As part of the proceeds, Swanson sent to the mint last week two bars of gold bullion weighing 46½ pounds avoirdupois, a bar weighing 11 pounds having been shipped. These together make 838.35 ounces troy, which at \$13.99 an ounce, the value of this shipment amounts to \$11,653. This, however, is by no means the total value recovered as the returns have yet to be received from the zinc precipitates which will be shipped to Selby & Co., San Francisco. Ore from this lease is still being treated and it is estimated that the present mill run will amount to 1800 tons.

At the lease, ore averaging \$40 a ton is being raised from the 150 level, but the best part of the mine is the 250-level where two shoots of good ore have been opened.

To mine this ore the shaft will be sunk 100 feet and a pump installed. In the meantime work on the ore body will be continued in the workings above the water level.

Consolidated.

The Silver Pick claim of the Manhattan Consolidated is beginning to assume an air of activity in pleasing contrast to its deserted appearance a month ago.

On the western end, about 150 feet from the east boundary of the Forman fraction, is the Kendall lease, which covers a length of 337 feet on the vein. Here a raise is being made to surface from the workings of an old leaching shaft and in a few days the leasers will have a new shaft 50 feet deep from surface, timbered and ready for the electric hoist, which is to be installed. In making this raise ore is being stoped from a streak from 16 to 29 inches wide, averaging from \$100 to \$150 a ton, and the tonnage of this grade of ore is rapidly increasing on the dump.

East, adjoining this, is the Mushet-Wittenberg lease, covering 250 feet on the vein. Here the gallows frame is being erected at the new shaft, which is timbered down 65 feet. The electric hoist and transformers are in position, power will be connected in a day or two and underground operations will then be resumed.

Only 50 feet east of this shaft work has been started on the new shaft on the Steffen lease, which covers 205 feet west of the company's main shaft and 120 feet east of it.

In the company's old workings from the 100-foot level to the old tunnel level there are over 20 feet of ore developed, assaying from \$16 to \$18, and the ore on the 200-foot

level, now under water, is said to be higher grade.

Big Four Lease.

Last week the crosscut from the 400-foot level of the Steen-Poak-Cicala lease on the Big Four broke into the vein at a point about 70 feet from the shaft, but it will require three or four days of drifting on the ore to catch the ore shoot, which yielded such an excellent tonnage of high grade ore from the 300-foot level to the surface.

The mine is in splendid condition. The latest development gives over 100 feet of stoping ground on the dip of the vein which will yield a big tonnage of high grade ore, while there are hundreds of tons of payable ore in the upper levels and also on the dump.

The leasers last week paid over \$4000 in wages alone, and their plans for the future working of the property are on a much larger scale than is generally believed.

Crescent Leases.

The three leases in operation on the property of the Crescent Mining company are all developing in a very promising manner.

At the Rupp-Nelson lease on the Reilly fraction the drift is out 90 feet in fair grade ore and the south crosscut in Gold Crater ground is also looking better.

On the Crescent claim, the Crescent Leasing company's shaft is now down 140 feet in milling ore. At the 150-foot level a drift will be run to the ore shoot opened up on the 100-foot level last month.

At the Kasperon lease on the Riley fraction the shaft is down 50 feet and crosscuts are being run through a mineralized formation carrying numerous stringers, some of which pan very promising values.

Rich Shoot on Jumping Jack.

Last week the drift from the 80-foot level of the Jumping Jack shaft broke into what is apparently the north end of the ore shoot opened up on the surface of the Putman-Kendall lease. At present the values, which run as high as \$100 a ton, are irregular through the vein and it will require several more shifts to determine the full width and values of the shoot.

The drift is now out 150 feet from the shaft and about under the surface workings, but as the shoot is pitching to the south it may require another 20 feet of drifting to reach the solid shoot of high grade ore.

The prospecting shaft on the surface is now down about 35 feet on the ore which maintains its width

and values in a most encouraging manner and there are now about 60 tons of ore on the dump that will average over \$50 a ton.

Ledge Struck on Mineral Hill.

Last week the tunnel at the Mineral Hill property broke into the ledge which, in the shaft sunk on the hill above, was four feet wide. It is to soon yet to give the width of the vein in the tunnel, as the miners had only just broken into it. The tunnel will be continued through the vein which will then be drifted on to the ore shoot.

At the Burr-Thomas lease, on the summit of the hill, the ore shoot is still producing high-grade ore from the southwest drift, where the rich streak is from 8 to 10 inches wide. Much of this ore is worth \$1 a pound and the remainder assays not less than \$100 a ton. In the last few days this streak of ore has given stronger indications of continuing to depth and widening in the fissure.

White Caps Busy.

Good progress is being made at the White Caps lease, where two shifts of miners are engaged in sinking the shaft which is now nearing the 130-foot level. The ore body is from 8 to 9 feet wide and still carries the splendid values of from \$88 to \$89 a ton, over 100 tons of this grade being now on the dump. The inflow of water is only moderate and is easily handled with a bucket.

The most favorable fact in connection with this ore body is that the values are steadily increasing at depth, and the White Caps gives every indication of being a great producer of high-grade ore.

Ledge on Gold Crater.

The Royston-Jones lease on the Gold Crater claim, adjoining the Jumping Jack on the south, broke into a ledge this week at a depth of 120 feet. The ore occurs in a contact of lime and quartzite, is the full width of the shaft, and while not high grade, carries sufficiently good values to justify the belief that drifting on it at greater depth a high-grade shoot will be opened up, and sinking on the vein is now in progress.

The lease is owned by officials of the Tonopah and Belmont mills at Millers, who have the utmost confidence in the ultimate result of their operations.

Placer on Breyfogle.

The Orphan claim, adjoining the Thanksgiving and owned by the Breyfogle syndicate, is producing
